Unlock FREE Software in your IBM Mainframe

*(It's already there -
training is the key)*

Details on these and other key
courses are found on our website at
<http://www.trainersfriend.com>

Call us to discuss how we can help
you unlock the hidden treasures
already buried on your IBM
mainframe and improve the
bottom line for your company.

Toll free (in the US): **800-993-8716**
Colorado local and international:
303-393-8716

Automatically included on your mainframe:

- Web server
- UNIX
- Java
- Unicode
- REXX
- Dialog Manager
- Language Environment
- Assembler

Little known features of software you already have:

- DB2
- CICS/TS
- COBOL
- PL/I
- SORT
- and more

IBM mainframes have been quietly transformed, the platform now:

- Has 64-bit hardware (z/Architecture)
- Runs 64-bit software (z/OS)
- Runs UNIX System Services as well as classic applications
- Provides a Java Virtual Machine (JVM)
- Includes a free Web server
- Is extremely scalable (1 to 1024 processors per sysplex)
- Has improved virtually every aspect of its legacy support, to make developers more productive
- Still offers the most hacker-proof security in the business

Here is an incredibly rich opportunity to utilize the facilities already on your systems. All it requires is a small investment in training your programmers, so they know what is available and how to use it!

Training from The Trainer's Friend provides the keys to unlock:

- z/OS (experienced mainframers): Introduction to z/OS; language courses, DB2 courses, ISPF Update, etc.
- z/OS (non-mainframers): Introduction to z/OS, ISPF, JCL, language courses, UNIX on the mainframe courses, DB2 courses
- Java: UNIX on the mainframe courses, Java Server Side Programming series, more
- Web on the mainframe: UNIX on mainframe courses, Java courses, WebSphere, more
- UNIX on the mainframe: Introduction to z/OS UNIX, Shell Script Programming in z/OS UNIX, Developing Applications for z/OS UNIX, Using REXX with z/OS UNIX, more
- DB2: Version transition series, DB2 Dynamic SQL, DB2 Stored Procedures, more
- Assembler: base Assembler class, update series, including 64-bit information and Unicode
- Programming: base classes (Assembler, COBOL, PL/I, C, Java), update series, including Unicode, XML, and Java-interoperability support, Using LE Services in z/OS, Inter-Language Communication in z/OS, Creating and Using DLLs in z/OS, more
- Dialog Manager: CLIST, REXX, and Developing Dialog Manager Applications in z/OS
- CICS/TS: CICS Transaction Server Differences, CICS/TS - Web Server Implementation, more
