

18. Features being investigated

The SIMULA Standards Group appoint a Technical Committee, to study features needing clarification or which may possibly be new recommended extensions.

The following features are currently being investigated:

- For statements in which the controlled variable is a variable called by name, procedure identifier, subscripted variable or remote identifier.
- class directfile
- reference parameters
- the procedure "call"
- syntax of blocks and statements
- syntax of conditional expressions
- hardware representation standards

A closer description of these features is given in [4] and [5].
