```
; Translation tables for SMTP.
; EBCDIC IBM-1147 (ECECP France) <-> ASCII ISO-8859-15 (Latin 9)
   caractères accentués français + signe euro €
; interesting readings :
   http://www.borgendale.com/codepage/j2conv.htm
   http://babel.alis.com/codage/iso8859/jeuxiso.htm (in French)
; The xlate table is dynallocated in the order of existence of :
; 1.smtpjobname.SMTP.TCPXLBIN
; 2.hlq.SMTP.TCPXLBIN
 3.smtpjobname.STANDARD.TCPXLBIN
  4.hlg.STANDARD.TCPXLBIN
; 5.internal
; Create the table : just run
  //STEP010 EXEC PGM=IKJEFT01
               DD *
  //SYSTSIN
  CONVXLAT -
   'fully.qualified.source' - /* this FB 80 sequential ds.
   'fully.qualified.target'
                              /* a FB 256 will be allocated */
  //SYSTSPRT DD SYSOUT=*
 Check that XMITIPCU AtSign is "@" (commercial at, x'44')
                            is "iso-8859-15
             and
                      char
; Modify TXT2HTML : put éè back to \{\} in <STYLE></STYLE> ; Modify TXT2RTF : put éèç back to \{\}\ in RTF controls
; If your SMTP server is not a front end, you may have to
; apply APAR PQ36249 (magical 'à' x'7c' will already have been ; translated to commercial at '@' x'44'):
 - modify your SMTPCONF with : REWRITE822HEADER NO
                                 ATSIGN @
; - modify SMTPNOTE exec with : atsign = "@"
; Restart SMTP, voila !
; Works also for TXT2PDF (modify variable 'Text' in TXT2PDFX)
; Works also for zapping INFOZIP (jobs IZIPA and IZIPE)
; Due to limited testing opportunities, I can't guarantee that
  it will work as you expect to. (although it should...)
; Backup what you think which should be before any mods.
; Sensible complaints welcome at jean-marc.luce@atosorigin.com :-))
; Enjoy!
